ANGULAR

ANGULAR IS A TYPESCRIPT BASED JAVA SCRIPT FRAMEWORK DEVELOPED BY GOOGLE

TYPESCRIPT

If you want to write a 100% object oriented code and easy to manage code in java script you can use typescript

WHY WE USE ANGULAR ?

1. Spa : single page application
2. Client side routing

NOTE : WE WILL COVER MORE FUNDAMENTALS ON ANGULAR IN OUR UPCOMING VIDEOS

ENVIROMENT SETUP

1. INSTALL nodejs
2. INSTALL ANGULAR BY USING CDM
`npm install -g @angular/cli`
3. CREATE ANGULAR PROJECT BY USING CMD
`ng new projectname`
4. RUN PROJECT IN BROWSER BY USING CDM
`ng serve --open`

NOTE : WATCH VIDEOS FOR PRACTICAL SESSIONS
